PUBLIC PRIVATE PARTNERSHIP TO IMPROVED PROFESSIONAL EDUCATION IN UKRAINE (Phase III)

© Swisscontact, VET school teachers during their practical training

PUBLIC PRIVATE PARTNERSHIP TO IMPROVED PROFESSIONAL EDUCATION IN UKRAINE is a project of the Swiss Agency for Development and Cooperation (SDC) in partnership with Geberit Trading LLC, Sika Ukraine LLC implemented by Swisscontact with the support of the Ministry of Education and Science of Ukraine.

RATIONALE

Due to wartime impacts and rapid technological advancements, Ukraine's economy faces a shortage of skilled labor across various sectors. Many companies are concerned about the lack of qualified staff, while numerous adults, including internally displaced persons, war veterans, and returning migrants, seek new skills and employment opportunities. VET in Ukraine faces challenges due to limited financial resources and persistent stereotypes about vocational graduates. Schools require modern technologies, equipment, and managerial capabilities to provide inclusive, market-relevant training.

The project aims to improve vocational education quality for construction workers through private sector investments, leveraging opportunities for systemic change and shifting attitudes towards VET as a key driver of economic recovery. This initiative helps young people and adults acquire market-demanded skills, enter the job market, and earn higher incomes.

The EdUP project Scale UP initiative is aimed at rehabilitating VET schools in frontline regions of Ukraine. It addresses the significant losses suffered by the VET sector due to Russia's military aggression. Through Scale UP, EdUP aims to rebuild and enhance the infrastructure and educational capacity of these schools, ensuring they meet modern educational standards and the needs of the job market.

GOALS / OBJECTIVES

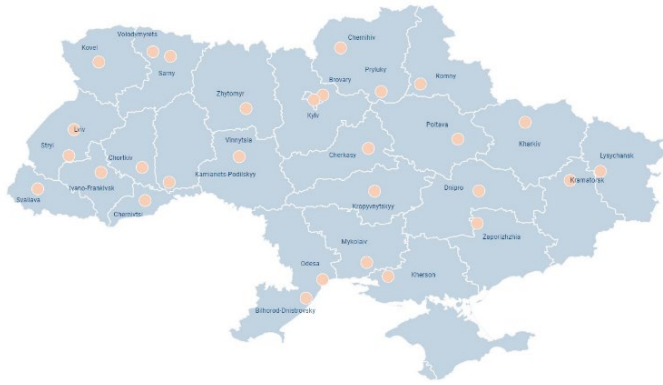

Offer diversification: VET schools and businesses will collaborate to create innovative programs, including modular courses for adults and recognition of prior learning via qualification centers. Both occupational and educational standards will be updated.

New teaching methods: The project will implement electronic learning materials, digitize the educational process, and create digital resources. Teachers will gain improved competencies, fostering an inclusive educational environment.

Private sector involvement: Encouraging private sector participation in defining and providing educational content, especially in construction professions, and developing business relations at school, regional, and national levels.

Organizational development and labor market insertion: Ensuring project sustainability through coaching, implementation of best practices in school management, career counseling, and enhancing the attractiveness of vocational education.

Infrastructure component: Additional support to 10 VET institutions located in Ukraine's southern and eastern regions. The aim is to rebuild and enhance the infrastructure and educational capacity of these schools, ensuring they meet modern educational standards and job market needs.

Project 29 VET schools are located all over Ukraine

KEY RESULTS SINCE PROJECT LAUNCH

Since Swisscontact took over the project implementation in March 2020 (phase II), activities were heavily influenced by covid-19 and war. Nevertheless, many activities are conducted in-person, under a revised security concept.

Results from previous phases:

- New plumber training curriculum, professional and educational standards, digital textbooks (incl in the form of mobile apps), number of educational materials are developed in close cooperation with business and introduced in all project schools;
- Almost 200 teachers upgraded their qualification; annual skills contests for students and teachers were held;
- 20 schools developed strategic plans;
- More than 20 companies became partners of the project and actively participate in VET reform.

The third phase of EdUP project is extended in both the number of the schools (29 instead of 25) and number of occupations (6 instead of 1).

Expected results:

- Creating better training and employment opportunities for construction professionals who are young people and adults;
- Women and men have access to a performing, labor market-oriented education and training offer in the construction sector;
- The private sector takes responsibility in the definition, provision and financing of VET in the construction sector at the provider level.
