In 2017, IDR 3,578,678,086 of premiums were distributed to farmers, buying stations, and certification holders in Aceh and Sulawesi, generating additional profit for farmers. Since 2014, the total premium payments disbursed amounts to IDR 13,432,534,443.

Farm productivity has increased from a baseline value of 513 kg/ha/year to a post-line value of 685 kg/ha/year (productivity increase of 33%) after farmers joined training activities and applied the knowledge to their farms. By 2020, the Program is aiming to increase to 1,000 kg/ha/year.

Program activities have positively affected the poverty level of cocoa farmers. The percentage of people living under $PPP 1.25 and $PPP 2.50 are 7.9% and 59%, respectively. Resulting in a 34% reduction of farmers living below $PPP 1.25.

The amount of GHG emitted from agricultural practices has been reduced to 0.85 tCO2e/MT, surpassing the annual target of 0.87 tCO2e/MT and close to the 2020 target of 0.74 tCO2e/MT.
STORIES FROM THE FIELD

1 Billion IDR Micro-Credit
The agricultural sector is considered high-risk business for banking, but the Sabar Menanti farmer group in West Sumatra gained the trust of BRI and became the first cocoa farmer group in the SCPP program to receive a 1 billion IDR loan! Dasril, the Chairman of the group, applied what he learned through SCPP Good Financial Practice training. Together, he and the other group members, successfully applied for the group loan. The group used the loan to buy input supplies and to rehabilitate farms.

Safe Sanitation for Cocoa-Farmer Families
Sanitation is a critical issue for many farm families in SCPP. More than 15 households in the village of Taninduka, Southeast Sulawesi, were identified as having no access to proper sanitation. Good Social Practice training gave the village the resources needed to establish a village committee and create a community action plan. As a result, the village mobilized funds to build 37 toilets and were formally declared an Open Defecation Free (ODF) Village, by the government of Kolaka Timur dis-trict, providing safe sanitation for all inhabitance.

Cocoa-Goats: Providing Organic Fertilizer
SCPP provides advanced skills to farmers to help them find solutions to important challenges. One solution to providing organic fertilizer in Mamuju, West Sulawesi, was to introduce 228 farmers to the concept of cocoa-goats. The farmers were taught how to make organic fertilizer and bio-pesticides from goat urine, providing a low-cost option for these farmers and their families. SCPP hopes to expand the cocoa-goat program in the future.
